FLOWAWAY

LIQUID DRAIN OPENER

FLOW AWAY is a powerful professional drain solvent designed to dissolve all organic obstructions on contact. **FLOW AWAY** is ideal for use in commercial kitchens, apartment complexes, industrial plants, hotels and motels, schools, food processing plants, etc.

ADVANTAGES

- **Opens Clogged Drains Fast.** **FLOW AWAY** goes to work immediately to safely dissolve common organic stoppages such as grease, sanitary napkins, coffee grounds, soap, paper, cloths, lint, cigarette butts, and petroleum greases.
- **Restores "Shrinking" Drain Pipe Diameter.** Over the years, every pipe begins to "shrink" with the build-up of grease deposits, soap films, soft scale, and slime. Because of the build-up, drain pipes lose their efficiency and reach the point where they "shrink" to such an extent that they become "slow" or actually stop. Regular applications of **FLOW AWAY** safely removes these deposits and eventually eliminates the shrinkage in traps, cross pipes, elbows, and other areas near the drain openings.
- **Will Not Harm Pipes.** **FLOW AWAY's** unique solvent action works only on organic matter. It will not deteriorate copper, steel, or PVC pipes and fittings or rubber hardware within the system. **FLOW AWAY** is neutralized when mixed with large volumes of drain water.
- **No Harmful Fumes or Unpleasant Odors.** **FLOW AWAY** is relatively odor free and does not produce noxious fumes. Any resulting odors will be from the actual organic substances breaking down and dissolving.
- **Concentrated Power.** Because **FLOW AWAY** contains especially blended ingredients that weigh twice as much as water, **FLOW AWAY's** own weight carries it quickly to the source of stoppage. This feature allows **FLOW AWAY** to concentrate its attack on stoppages in the trap and those further along the line with little loss of activity.
- **Saves Money.** **FLOW AWAY** should be used as a preventative maintenance product on a regular basis to eliminate costly down time and expensive professional help.

Remove excess water from sink, drain, or toilet prior to use. Do not pour into standing water. Do not use on aluminium or galvanized metal. Will etch acid-sensitive porcelain fixtures. Use with adequate ventilation.

NOTE: Where drain fails to open due to blockage by glass, plastic, iron, or other inorganic material, use great caution in inserting mechanical cleaning devices since **FLOW AWAY** remains active until it has been thoroughly reacted or diluted with large quantities of water. Rinse off equipment thoroughly with water after opening drain.

DANGER: POISON. KEEP OUT OF REACH OF CHILDREN. Contains sulfuric acid. Causes severe burns. Avoid contact with skin, eyes, or clothing. Wash hands or any other area thoroughly if exposed to the concentrated liquid or diluted product. If splashed on clothing, remove garments immediately and wash skin with soap and water.
